

## Finding the output of loops :

### **Question 1 :**

Identify the output of the following loop and the number of times the following loop executes

```
int p = 200;
while(p <= 100){
    p = p - 20;
}
System.out.println(p);
```

### **Question 2 :**

Identify the output of the following loop and the number of times the following loop executes

```
int i;
for(i = 5; i >= 1; i - - ){
    if(i%2==1){
        System.out.println(i);
        i -- ;
    }
}
```

**Question 3 :**

Identify the output of the following loop and the number of times the following loop executes

```
int a = 1;
while(a<=6){
    if(a>3){
        break;
    }
    System.out.println(a);
    a++;
}
```

**Question 4 :**

Identify the output of the following loop and the number of times the following loop executes

```
for(int i=0; i<10; i++){
    if(i%2==0){
        System.out.println(i);
    }
    else{
        i++;
    }
}
```

**Question 5 :**

Identify the output of the following loop and the number of times the following loop executes

```
int a = 0;
int sum = 0;
while (a<=7){
    sum +=a;
    if(a>4){
        break;
    }
    a++;
}
System.out.println(sum);
}
```

**Question 6 :**

Identify the output of the following loop, the number of times the loop executes, and the value of sum after loop execution

```
int sum = 0;
for(int i= 1; i<=10; i ++){
    if(i%3==0){
        System.out.println(i);
        sum = sum + i;
    }
    i++;
}
```

**Question 7 :**

Identify the output of the following loop and the number of times the following loop executes

```
for(int i = 11; i<=20; i++){  
    if(i % 3 == 0){  
        continue;  
    }  
    System.out.println(i);  
}
```

**Question 8 :**

What is the output of the following program when a is 5 and b is 8.

```
int d = 0;  
for(d=a; d <= a*b + a; d = d + b) {  
    if (d % a == 1)  
        break;  
}  
System.out.println(d);
```

**Question 9 :**

Find the output of the following program:

```
int temp = 0;
int sum = 0;
do {
    sum = sum + temp;
    temp ++;
}
while(temp<20);
System.out.println(sum);
```
