

Math Class Methods :

Question 1 :

Give the output for the following block of code

```
double a= 5.212;  
double b= 3.145;  
System.out.println(Math.max(a, b) + Math.floor(a));  
System.out.println( Math.min(Math.round(a), Math.ceil(b) + 3));
```

Question 2 :

Give the output for the following block of code

```
int c = 2;  
int d = 8;  
System.out.println(Math.pow(d, c) );  
System.out.println(Math.max(Math.cbrt(d), c));  
System.out.println(Math.abs(c-d) * 2);
```

Question 3 :

Give the output for the following block of code

```
int x = 25;  
double y = 3.2;  
System.out.println(Math.max(Math.sqrt(x), y));  
System.out.println(Math.abs(Math.sqrt(x) - (Math.ceil(y) + 3)));
```

Question 4 :

Anand wrote a program but always got the output as 1.0 irrespective of the value he used for the variable x. Identify the type of error and rewrite the correct program

```
import java.util.*;
public class Program{
    public static void main(){
        Scanner sa = new Scanner(System.in);
        System.out.println("Enter the number");
        int x = sa.nextInt();
        double output = Math.pow(x , 1/2);
    }
}
```
