

Wrapper Classes - Vocabulary and terms :

Evaluate the following :

1. Wrapper Classes belong to which package?
2. "A wrapper class wraps primitive data types". What feature of Object Oriented Programming is being represented here.
3. Integer a = 3; → What process is being used in this Java statement to initialise the variable a.
4. Name a method that can be used to convert the String representation of a double value to a double.
5. Krishna used a println statement to print the value in a variable called num of the Double data type.
`System.out.println(num);`
What process helped Krishna do this even if num wasn't of a primitive type.

Evaluate the following :

1. Rishi wrote a program that returned a String value "123". He couldn't perform any mathematical operations with the string, so he wanted to convert it into an int value. What method could he use?
2. Name a Character method that checks if a character is in the uppercase. What is the return data type of this method?
3. In a program, Rahul needed to check if a character is an empty space or not. What Character method could help him do this?
4. Name the Character method used to check if a character is an alphabet or a number.
5. What is the data type of the value returned when I use the `toUpperCase(char check)` method to convert the check to uppercase.
